

DietTracker

All Derma Medical Clinic — Diet & Health Tracking App

A simple step-by-step guide to setting up and using DietTracker on your phone — no technical knowledge needed.

How-to-Use Guide · v1.1 · 2026-08-09

What's in this guide

1. Getting the app on your phone
2. Setting up your profile (first time only)
3. Your home screen
4. Logging your day
5. Checking your progress
6. Backing up your data & printing for your doctor
7. Settings
8. Do's and Don'ts
9. If something goes wrong
10. Contact the clinic

First time using the app?

Start at Section 1 below — you'll set up your app and your profile from scratch, and everything after that just works.

Used it before, but the app looks empty now?

Don't set up a new profile — go straight to the welcome screen's

"Restore from Backup"

button (see Section 1's tip box) and bring your old records back instead.

1. Getting the app on your phone

DietTracker works right in your phone's web browser — there is nothing to download from an app store. The clinic will send you a link (usually over WhatsApp). Tap it to open the app.

Add it to your Home Screen

We strongly recommend adding DietTracker to your Home Screen instead of using it from the WhatsApp link every time. This makes it open like a normal app with one tap, and it is safer for keeping your data on your phone.

iPhone Using Safari

1. Open the DietTracker link in **Safari** (not WhatsApp's built-in browser — tap "Open in Safari" if you're given the option, or copy the link and paste it into Safari).
2. Tap the **Share** button (the square with an arrow pointing up) at the bottom of the screen.
3. Scroll down and tap "**Add to Home Screen**".
4. Tap "**Add**" in the top-right corner.

Android Using Chrome

1. Open the DietTracker link in **Chrome**.
2. Tap the : menu (three dots) in the top-right corner.
3. Tap "**Add to Home Screen**" or "**Install app**".
4. Confirm by tapping "**Add**" or "**Install**".

What to expect

After adding it, you'll see the

clinic's butterfly logo

as an icon on your home screen, labelled "DietTracker" — just like any other app. From now on, always open the app from this icon.

Never delete this icon without backing up first

If you ever delete the DietTracker icon and add it again, your phone may not bring your old records back automatically — even though this shouldn't happen, it sometimes does on iPhone. Always tap

Save Backup

(Export tab) *before* removing the icon, and use the

Restore from Backup

button (right on the first screen) afterward if needed.

2. Setting up your profile (first time only)

1

The first time you open the app, tap **"Get Started"** on the welcome screen.

2

Fill in your name and basic details. Only **Full Name** is required — everything else can be filled in later from Settings if you don't have it on hand. Tap **"Save Profile"** at the bottom when done.

Welcome to DietTracker

Home Progress Entries Export Settings

You only do this once

Your profile is saved automatically. You won't need to fill this in again unless you use "Clear All Data" in Settings (see the Do's and Don'ts section).

3. Your home screen

1

This is what greets you every time you open the app. It shows today's entry status and a quick summary of your week. Tap **"Start Today's Log"** to begin logging.

The five icons at the bottom of the screen are always there — **Home, Progress, Entries, Export, Settings** — tap any of them to jump to that section.

4. Logging your day

1

For each meal (Breakfast, Lunch, Dinner) you can either:

- Tap "**Add Photo**" to take a picture of your meal, and/or type a short description, or
- Turn on the **NIL** switch if you did not eat that meal.

The screenshot displays the 'Daily Entry' interface for the date 9 Aug 2026. It features three meal logging sections: Breakfast, Lunch, and Dinner. Each section includes a 'NIL' toggle switch, an 'Add Photo' button, and a text input field for a description. The 'Entries' tab is active in the bottom navigation bar.

Home Progress **Entries** Export Settings

2

As you type, the app saves automatically after a moment — look for the small ✓ **Saved** label under the date at the top. You do not need to tap any "Save" button.

The screenshot displays the 'Daily Entry' screen of a mobile application. At the top, there is a back arrow and the title 'Daily Entry'. Below this is a date header '9 Aug 2026' with a small green checkmark and the word 'Saved' underneath it. The main content area is divided into three sections for 'Breakfast', 'Lunch', and 'Dinner'. Each section has a header with a meal icon, the meal name, and a 'NIL' status with a toggle switch and an expand/collapse arrow. Below each header is an 'Add Photo' button and a text input field for describing the meal. The 'Breakfast' section is pre-filled with the text 'Chicken rice, small portion, no skin'. The 'Lunch' and 'Dinner' sections have placeholder text 'Describe your meal...'. At the bottom of the screen is a navigation bar with five icons: Home, Progress, Entries (highlighted in green), Export, and Settings.

Home Progress **Entries** Export Settings

3

Scroll down for **Health Metrics** — weight, blood pressure, steps, distance, bowel movements. Fill in whatever you have; none of these fields are required.

The screenshot shows the 'Daily Entry' screen of a health app. At the top, there is a back arrow and the title 'Daily Entry'. Below this is a section titled 'Health Metrics'. It contains several input fields: 'Distance (KM)' with the value '0.0', 'K Calories' with the value '0', 'Total Steps' with the value '0', and 'Aerobic Steps' with the value '0'. Below these fields is a note: 'Enter from your phone's Health app'. Further down are 'Weight (KG)' with the value '58.5' and 'BP/Pulse' with the value '120/80'. The 'BP/Pulse' field is highlighted with a green border. Below these are 'Bowel' with the text 'Bowel movement details', 'Alcohol/Nuts' with the text 'Specify if any', and 'Remarks' with the text 'Additional notes...'. At the bottom of the screen is a navigation bar with five icons: Home, Progress, Entries (highlighted in green), Export, and Settings.

Tip: switching days

Use the

<

and

>

arrows at the top to move between days. Anything you typed is saved automatically before the app switches days.

If you get interrupted

If you switch to another app or answer a call while typing a number, tap back into the app and check the field before moving on — then tap anywhere outside the box (this "locks in" the number) to make sure it's saved.

5. Checking your progress

- 1
- The **Progress** tab shows your BMI, weight trend over time, and a summary of how consistently you've been logging. This updates automatically as you log more days — there's nothing to set up.

6. Backing up your data & printing for your doctor

1

Open the **Export** tab. Choose a date range, then:

- **Generate PDF** — creates a printable sheet to bring to your appointment, in the same layout as the old paper form.
- **Download Backup** — saves a copy of *all* your data (entries, photos, profile) as a file on your phone.

This is the single most important habit in this guide

Your data lives only on this phone — DietTracker does not store anything on the internet. Tap

"Download Backup"

regularly (once a week is a good habit). If your phone is ever lost, replaced, or its storage gets cleared, a recent backup is the only way to get your records back. The app itself will remind you with a "Time for a backup" banner on the home screen if it's been a while — when you see it, tap it and back up right away.

Switching phones? Even Android to iPhone (or the other way)?

A backup made on one type of phone restores perfectly on the other — the file works the same way everywhere. Back up on your old phone, then use

Restore from Backup

on the new one.

7. Settings

1

The Settings tab lets you edit your profile, see how much storage the app is using, and read the clinic's contact details. It also has a **"Clear All Data"** option — see the warning below before ever using it.

If you ever see this screen, stop and think

"Clear All Data" is not a "refresh" or "fix" button — it permanently deletes everything. Only use it if you genuinely want to erase your records and start over.

8. Do's and Don'ts

	Action	Why
DO	Open the app from the Home Screen icon, every time	Keeps your data in one consistent place instead of switching between the app and a browser tab.
DO	Download a backup at least once a week	It's the only copy of your data outside this one phone. The app will remind you if you forget.
DO	Back up <i>before</i> deleting the DietTracker icon, for any reason	Removing and re-adding the icon can lose your data on some iPhones — a recent backup means you can always bring it back.
DO	Use "Restore from Backup" on the welcome screen if the app ever looks empty	The fastest way back to your records — works even if you're now on a different phone or a different type of phone.
DO	Wait for the "✓ Saved" label before switching apps	Confirms your entry actually reached the phone's storage.
DO	Keep some free storage space on your phone	Very full phones are more likely to have older app data cleared by the phone itself.
DON'T	Use "Clear All Data" unless you are certain	This permanently erases every entry, photo, and your profile. It cannot be undone.
DON'T	Clear your browser's history, cache, or site data	On iPhone and Android, this deletes DietTracker's data the same way "Clear All Data" does — the app has no way to prevent this.
DON'T	Delete or reinstall the app icon without backing up first	This is the single most common way records get lost. Back up first, every time — see the DO above.
DON'T	Set up a brand-new profile just because the app looks empty	Try "Restore from Backup" first — your old records may just need to be brought back, not re-entered from scratch.

9. If something goes wrong

The app shows an error message instead of your data.

Don't clear your data or reinstall. Tap "Try Again" first — your data is very likely still on the phone. If it keeps happening, use the "Download Diagnostics" button on that screen and send the file to the clinic over WhatsApp.

The app opens to the welcome screen and your entries are missing.

Don't tap "Get Started" and set up a new profile. Tap the **"Restore from Backup"** button right on that same screen instead, and pick your most recent backup file. This can happen after removing and re-adding the Home Screen icon, switching phones, or if you sometimes use the Home Screen icon and sometimes a shared link — always use the Home Screen icon going forward once you've restored.

You typed something and it seems to have disappeared.

Re-enter it, then wait for the "✓ Saved" label before doing anything else (switching apps, locking your phone, answering a call).

10. Contact the clinic

All Derma Medical Clinic

Phone: +65 6238 0979

WhatsApp: +65 9836 4006

If you're ever unsure whether something worked, or your data looks wrong, it's always fine to reach out — don't guess.
